Administration—Setup

Enhancement#: 4130 (01/05/2005)
Category: Administration
Subcategory: Set-up
Software Version/Release: 7.3.3
Subject: Documentation
Proposal: I would like to have a master index that referenced all of the topics in all of the manuals.
I was looking today for information on portable circ. couldn`t find it. Turns out it was part of 7.3 documentation, but can`t find it in any of the indexes, but it is posted online.
Often I am looking for a topic so I go to circ, then I have to check circ setup, and then I have to check Horizon, then I have to check system admin. I would like one place that says for this check circ for this check system admin for this check etc...

Software Version/Release: Horizon 7.3.3
Subject: Floating Collections for Designated Locations
Proposal: For consortia who want to float a collection, a grave consideration comes into play. One member library cannot designate the collection to float only amongst its own locations. If any member library requests an item and checks it in, the location of the item changes to that library.
The floating collections feature should be altered to include only certain locations (Library X and all its branches), while allowing an item to retain its current location when checked in at other locations (Libraries Y and Z and their branches).

Software Version/Release: Horizon 7.3.2
Subject: Allow Override for Max Hold Requests (Circ_P #4)
Proposal: If Circ_Parameter #4 -- Max Hold Requests for BTYPE is set to a reasonable number (20 in our case), the system doesn`t provide any way to over-ride this for special cases.
An over-ride button would be the most logical solution, but being able to set an exception for certain types of material (ILL) would solve our immediate concern. Attempting to create an exception for material type gives an integrity trigger failed error (itype group must be empty).
Support`s solution to increase the max number is pointless, as someone will always be at what-ever maxium limit we set (unless we specify something like 999 -- and what`s the point of that).

Subject: Library Hours
Proposal: Many libraries have summer hours. Recently our Board of Control decided to do the same. There is no mechanism for us to put in changes to library hours based on month to cover the summer hour change. I would like to have that ability AND the ability to copy to different locations rather than having put each of those in individually.
